Examen ASC

1. $x = 125, y = 78$

a) $(125)_8 = ?$

$$125 : 8 = 15 \text{ rest } 5$$

$$15 : 8 = 1 \text{ rest } 7$$

$$1 : 8 = 0 \text{ rest } 1$$

$$\Rightarrow (125)_8 = (\overline{175})_8$$

$(78)_8 = ?$

$$78 : 8 = 9 \text{ rest } 6$$

$$9 : 8 = 1 \text{ rest } 1$$

$$1 : 8 = 0 \text{ rest } 1$$

$$\Rightarrow (78)_8 = (\overline{116})_8$$

$$b) x = (\overline{145})_8^2 = 001 \ 111 \ 101 = \underline{1111101}$$

$$(\overline{1})_8^2 = 001$$

$$(\overline{4})_8^2 = 111$$

$$(\overline{5})_8^2 = 101$$

$$(1111101)_2^{16} = (\overline{7D})_{16} = X$$

$$\frac{(\overline{1111})_2^{16}}{2} = F$$

$$(0111)_2^{16} = 4$$

$$(1101)_2^{16} = \text{D}$$

$$y = (\overline{116})_8^2 = ?$$

$$(\overline{1})_8^2 = 001$$

$$(\overline{4})_8^2 = 001$$

$$(\overline{6})_8^2 = 110$$

$$\left. \begin{array}{l} (\overline{1})_8^2 = 001 \\ (\overline{4})_8^2 = 001 \\ (\overline{6})_8^2 = 110 \end{array} \right\} \Rightarrow y = (\overline{1001110})_2$$

2/11

$$y = (\overline{1001110})_2^{16} = ?$$

$$\left. \begin{array}{l} (\overline{0100})_2^{16} = 4 \\ (\overline{1110})_2^{16} = E \end{array} \right\} \Rightarrow y = (\overline{4E})_{16}$$

$$c) x = (\overline{175})_8 = (\overline{7D})_{16}$$

$$y = (\overline{116})_8 = (\overline{4E})_{16}$$

$$x + y = (\overline{175})_8 + (\overline{116})_8 = (\overline{313})_8$$

$$x - y = (\overline{7D})_{16} - (\overline{4E})_{16} = (\overline{2F})_{16}$$

$$d) (\overline{313})_8^{-1} = 3 \cdot 8^0 + 1 \cdot 8^1 + 3 \cdot 8^2 = 3 \cdot 1 + 8 + 3 \cdot 64 =$$

$$= 3 + 8 + 192 = 203$$

$$(\overline{2F})_{16}^{-1} = \overline{F} \cdot 16^0 + 2 \cdot 16^1 = 15 \cdot 1 + 2 \cdot 16 =$$

$$= 15 + 32 = 47$$

$$\begin{array}{r} 111 \\ 175 + \\ 116 \\ \hline 313 \\ \\ 7D - \\ 4E \\ \hline 2F \end{array}$$

2) $Z = x - y$ pe 8 biți \Rightarrow mulțimea valorilor este $\{-128, \dots, 127\}$

$x, y \in$ mulțimii de valori și sunt pozitive \Rightarrow le reprezentăm în baza 2 (calculat anterior la b))

$$x = \overline{1111101}$$

$$y = \overline{1001110}$$

Calculăm complementul lui y față de 1 și de 2:

$$\Rightarrow \text{complementul lui } y \text{ față de 1} = \overline{0110001} = \overline{110001}$$

$$\Rightarrow \text{complementul lui } y \text{ față de 2} = \overline{110010}$$

Apoi adunăm x la complementul lui y față de 2:

$$\overline{1111101} + \overline{110010} = \overline{10101111}$$

$$\begin{array}{r} 1111101 + \\ 110010 \\ \hline 10101111 \end{array}$$

$$\left(\overline{10101111} \right)_2^{-1} = 2^0 + 2^1 + 2^2 + 2^3 + 2^5 + 2^7 = 1 + 2 + 4 + 8 + 32 + 128 = 175$$

Cel mai semnificativ bit este 1 \Rightarrow avem rezultat negativ

$$\Rightarrow 256 + Z = 175 \Rightarrow Z = 175 - 256 = -81$$

f) $0 \times C29A0000$

Format single $\Rightarrow n = 32$

$$K = 8 \Rightarrow E_{\max} = \text{BIAS} = 127$$

\Downarrow

$$E_{\min} = -126$$

$$p = n - K = 24 \Rightarrow |p| = 23 \text{ (nr.}$$

de cifre al mantisei)

$$\left. \begin{array}{l} C = \overline{1100} \\ 2 = \overline{0010} \\ 9 = \overline{1001} \\ 4 = \overline{1010} \\ 0 = \overline{0000} \end{array} \right\} \begin{array}{l} \text{Reprezentarea în binar a fi:} \\ \\ \underbrace{1100 \ 0010 \ 1001}_{C} \underbrace{1010 \ 0000 \ 0000 \ 0000}_{p \text{ (mantisa)}} \\ \downarrow \\ A = 1 \end{array}$$

$C = 100 \ 0010 \ 1 \Rightarrow$ Sinteza în format normalizat

$$\Rightarrow x = (-1)^A \cdot 2^E \cdot \overline{1,p}$$

$$\left. \begin{array}{l} E = C - \text{BIAS} \\ (C)_2^{-1} = 133 \end{array} \right\} \Rightarrow E = 133 - 127 = 6$$

5/11

$$\begin{aligned}
 (p)_2^{-1} &= \cancel{0,100010} = (0,0011010)_2 = \frac{1}{4} + \frac{1}{16} + \frac{1}{32} = \\
 &= \frac{8+2+1}{32} = \frac{11}{32} = \\
 &= 0,34375
 \end{aligned}$$

$$\begin{aligned}
 \Rightarrow x &= (-1)^1 \cdot 2^6 \cdot \overline{1,0011010} = (-1) \cdot 64 \cdot 1,34375 = \\
 &= (-1) \cdot 86 = -86 \quad (\text{numărul cerut})
 \end{aligned}$$
